

SINE CLEANING GUIDE

CLEANING AND MAINTENANCE OF THE SINE LAMP

DUST

Use a vacuum cleaner or take the lamp apart and gently beat the felt parts. Simple and easy – just as you would do with a carpet.

STAINS

Take the lamp apart and gently rub the stain off with a soft sponge and upholstery detergents. Avoid using abrasive sponges that may scratch the material.

Always place the felt material on a flat surface when cleaning it.

Hang the wet felt parts and allow them to dry after cleaning. Note that soaking-wet material may drip on to the floor.

Important note: the material must be completely dry before it is mounted again on the electrical parts.

Do not wring or twist the felt, as this causes folding marks.

The more stubborn stains could be removed by dry cleaning. Remember to specify the material (Polyester PET, max 40 degrees) and that the felt should not be wringed, twisted, or folded.

FOLDING MARKS

Do not wring or twist the felt, as this causes folding marks.

In case you want to dismantle the lamp, make sure that you always roll the felt parts. Never fold the felt.

If the felt gets folding marks, remove them by steam ironing the felt at heat setting • to • •. Please note that this is a synthetic blend of felt, so it can melt if the heat is stronger than recommended.
